

MUHAMMAD YUSUF | SENIOR CLOUD ENGINEER | MULTI-CLOUD | TERRAFORM | CI/CD | CLOUD AUTOMATION

A.S Computer Science & Engineering | Bay Area, CA | rmyusufrehman@gmail.com | +1 (424) 305-8206 | **Citizenship:** United States

EXECUTIVE SUMMARY

Cloud engineer delivering reliable production infrastructure through automation, release engineering, configuration management and operational monitoring, connecting hands-on technical execution with business priorities while working across teams to support service reliability, consistent delivery and accountable ownership.

CORE SKILLS

- **Cloud Architecture:** Design resilient infrastructure and plan workload capacity around application needs, connecting service availability with reliable operations and consistent environment management for enterprise production systems.
- **Delivery Engineering:** Support release governance and production readiness through repeatable delivery workflows, automated verification and coordinated change practices that connect software engineering with dependable operational outcomes.
- **Leadership & Cross-Functional Collaboration:** Take technical ownership, coordinate engineering priorities and communicate operational requirements across teams, supporting shared delivery goals through clear accountability and practical collaboration.

PROFESSIONAL EXPERIENCE

Arqon Consulting | DevOps Engineer | Bay Area, CA | Jan 2025 - Present

- Engineered resilient production workloads through high-availability architecture, sustaining 99.9% uptime while aligning infrastructure design with service reliability needs and supporting dependable operations across the systems used by delivery teams.
- Accelerated software delivery through GitHub Actions workflows and SonarQube quality gates, bringing deployment times below 60 seconds while integrating automated release checks into the engineering process for production changes.
- Reduced recovery time by applying Ansible configuration management alongside Python and Bash maintenance scripts, making infrastructure operations repeatable and helping engineering teams restore dependable service through consistent system maintenance practices.
- **Selected Project:** Release Automation System - Established Jenkins delivery pipelines with complete artifact traceability, connecting build outputs to release workflows so engineering teams could track the software delivered into production environments.

Venterra Group | Cloud Engineer | Bay Area, CA | Aug 2023 - Jan 2025

- Streamlined enterprise release delivery to improve deployment efficiency by 60%, reducing operational errors through repeatable delivery practices that helped teams coordinate software changes and maintain a dependable path into production systems.
- Supported container service readiness in 10-30 seconds by configuring scalable ingress routing, connecting application delivery needs with runtime availability so engineering teams could bring deployed services online reliably and support production workloads.
- **Selected Project:** Automated Infrastructure Provisioning - Established modular Terraform workflows for environment creation in 5-10 minutes, making infrastructure setup repeatable and helping delivery teams prepare consistent environments for their application deployment requirements.

EDUCATION & CERTIFICATIONS

- **A.S. Computer Science & Engineering**, Los Angeles Harbor College
- **Certifications:** AWS Certified Solutions Architect - Associate (SAA) | AWS Certified Cloud Practitioner (CCP)

ADDITIONAL INFORMATION

- **Languages:** English (Fluent) | Urdu (Fluent) | Hindi (Conversational)
- **Work Authorization:** United States Citizen (No sponsorship required)
