

MUHAMMAD YUSUF | CLOUD ENGINEER | MULTI-CLOUD | TERRAFORM | CI/CD | CLOUD AUTOMATION

A.S Computer Science & Engineering | Bay Area, CA | rmyusufrehman@gmail.com | +1 (424) 305-8206 | Citizenship: United States

EXECUTIVE SUMMARY

Cloud engineer delivering reliable infrastructure and efficient operations, aligning technical execution with business needs through practical automation expertise and accountable service ownership.

CORE SKILLS

Cloud & Infrastructure: Multi-cloud infrastructure provisioning using Helm charts, and GitOps workflows (FluxCD/ArgoCD) to maintain immutable architecture across environments.

DevOps & Platforms: Enterprise container orchestration with Docker alongside automated pipeline testing, vulnerability scanning, and blue/green deployment strategy.

Leadership & Cross-Functional Collaboration: Strong technical ownership, partnering with engineering teams to optimize SDLC workflows, monitor production health, and drive incident response SLAs.

PROFESSIONAL EXPERIENCE

Arqon Consulting | DevOps Engineer | Bay Area, CA | Jan 2025 - Present

- Designed and governed high-availability cloud architectures across multi-region environments, ensuring 99.9% operational uptime for mission-critical enterprise production workloads.
- Optimized GitHub Actions workflows with SonarQube quality gates and dynamic artifact caching, achieving < 60s automated deployments and instant rollback capabilities.
- Automated configuration management and system provisioning using Ansible, Python, and Bash scripts to enhance system reliability and significantly reduce MTTR.

Selected Project: Release Automation System - Built automated artifact management and release pipelines using Jenkins, ensuring 100% deployment consistency and full release traceability across all stages.

Ventera Group | Cloud Engineer | Bay Area, CA | Aug 2023 - Jan 2025

- Developed end-to-end release delivery pipelines, improving deployment efficiency by 60%+ while eliminating manual configuration errors across complex enterprise environments.
- Deployed containerized microservice workloads on Kubernetes clusters, enabling 10–30s service readiness with scalable ingress routing, auto-scaling, and health checks.

Selected Project: Automated Infrastructure Provisioning - Built modular Terraform scripts and ECR/ACR registry access controls, enabling full multi-tier environment setup in 5–10 minutes.

EDUCATION & CERTIFICATIONS

A.S. Computer Science & Engineering, Los Angeles Harbor College

Certifications: AWS Certified Solutions Architect - Associate (SAA) | AWS Certified Cloud Practitioner (CCP)
